

Changing Timing (for Manually Timed Test Clips)

The timing of clip elements in manually timed test clips can be changed in two ways. You can drag and drop clip elements to change their order. The moved clip element will take on the offset halfway between its siblings. Alternatively, the offset display of clip elements is an input box and therefore editable. Single click the offset of the clip element you want to change to put the cursor in the input box. Type in the desired offset in seconds, and it will later automatically be formatted as HH:MM:SS.MS.
