

Dragging/Clicking “New” Buttons

You can add a message, checkpoint, delay, or browser action by using the buttons located in the upper tab bar of the SOASTA CloudTest Clip Editor. Single click any of the icons to insert a new test clip element. It will be placed after the currently selected clip element (if one is selected). Alternatively, you can drag a new test clip element from the icon and place it anywhere in the test clip that you like. Messages and browser actions added this way are empty, with no operation or action associated.
