

Prerequisites – Target(s), Script(s)

Before creating a new Test Clip you must have at least one Target and/or at least one Script in your Repository. You can verify that you have these items in the SOASTA Repository tab in SOASTA Central.

If you want to create a Browser Action Test Clip, you should install the SOASTA Browser Recorder (Firefox only). Go to the Welcome tab of SOASTA Central. Under "Download," click on the link for "Browser Recorder Installer".
